Lunch and refreshments provided

Course Overview

VPAU324

Develop a carbon inventory for the workplace

This unit describes the outcomes required to identify and categorise the carbon emissions of an organisation, determine the correct methods for estimating those emissions and produce a carbon inventory for that organisation.

- Understand the context of carbon accounting
- Learn carbon accounting methodologies
- Apply carbon accounting methodologies and develop a carbon inventory
- Analyse an organisation's carbon inventory

VPAU325

Develop a carbon report for the workplace

This unit applies to the business environment of any organisation, including commercial operations, community organisations such as not-for-profit NGOs and government agencies that wish to provide a report on that organisation's carbon emissions and their response to it.

- Review the organisation's carbon management options
 - Develop a carbon report for the organisation
 - Review carbon reporting procedures
-

Australia's first accredited course in carbon accounting!

The National Centre for Sustainability (NCS) at Swinburne University of Technology provides educational leadership in sustainability and works in partnership with industry, government and community to undertake program delivery, resource development, project work and applied research to support the development of sustainable practices in business, government and the community. NCS at Swinburne offers a range of services including:

- Specialised courses and accredited training programs
- Facilitation and delivery of behavioural change programs
- Consultation and advice on sustainable business strategies and methods of implementation
- Project management, independent evaluation and reporting
- Market research and stakeholder engagement
- Research and development of new educational programs
