Title: Hydrogen Refuelling Station Launch  
Creator: Swinburne University of Technology  
Year: 2024

Audio/video for this transcript available from: <http://commons.swinburne.edu.au>

GORDON CHAKAODZA: We're really excited to be launching the hydrogen refuelling station today.

It's been a project that we've been working on for the last two years, and it's really exciting because it's probably the only refueller in Australia that is going to be focused on research.

KAREN HAPGOOD: The Victorian Hydrogen Hub is working towards preparing Australia for a hydrogen future by really bringing together researchers, industry, Swinburne and CSIRO to look at how to approach the hydrogen economy from the production, storage, skills, and the regulatory and technical requirements to drive us forward to a net zero 2030.
