

ICAP 2010

22nd International Conference on
Atomic Physics

25-30 July 2010

Cairns, Australia

Book of Abstracts

ICAP 2010 Committees

Co-chairs

Peter Hannaford, Hans Bachor

Program Committee

Alain Aspect France

Hans Bachor Australia

Sergei Bagayev Russia

Vanderlei Bagnato Brazil

Rainer Blatt Austria

Nir Davidson Israel

Gordon Drake Canada

Wolfgang Ertmer Germany

Phillip Gould USA

Peter Hannaford Australia

Ed Hinds U.K.

Massimo Inguscio Italy

Wonho Jhe Korea

Hideotoshi Katori Japan

Daniel Kleppner USA

Michele Leduc France

Maciej Lewenstein Spain

Margaret Murnane USA

Eugene Polzik Denmark

Gerhard Rempe Germany

Monika Ritsch-Marte Austria

Sando Stringari Italy

Vladan Vuletic USA

Xinye Xu China

Local Organizing Committee

Ken Baldwin, The Australian National University
Peter Drummond, Swinburne University of Technology
Andre Luiten, University of Western Australia
Russell McLean, Swinburne University of Technology
Halina Rubinsztein-Dunlop, The University of Queensland
Robert Sang, Griffith University
Robert Scholten, The University of Melbourne
Andrew Wilson, University of Otago

International Advisory Committee

Ennio Arimondo Italy
Vanderlei Bagnato Brazil
Victor Balykin Russia
Rainer Blatt Austria
Claude Cohen-Tannoudji France
Robin Cote USA
Gordon Drake Canada
Norval Fortson USA
Theodore Haensch Germany
Serge Haroche France
Ed Hinds U.K.
Massimo Inguscio Italy
Wolfgang Ketterle USA
Daniel Kleppner USA
William Phillips USA
Lev Pitaevskii Russia
David Pritchard USA
Fujio Shimizu Japan
Winthrop Smith USA
Jook Walraven The Netherlands
David Wineland USA
Tsutomu Yabuzaki Japan

Table of Contents

Invited Talks

Monday 26 July, 8.30 am-10.15 am

Opening Talk

From optical pumping to quantum gases (45min) 38
Claude Cohen-Tannoudji

Ultracold gases and Bose-Einstein condensates

Synthetic electric and magnetic fields for ultracold neutral atoms (45 min) 39
Bill Phillips

Monday 26 July, 10.45 am-12.45 am

Ultracold gases and Bose-Einstein condensates

Artificial gauge fields for neutral atoms: from Sagnac's to Berry's phase (30 min) 40
Jean Dalibard

Quantum gas microscope - probing the superfluid to Mott insulator transition at the single atom level (30 min) 41
Markus Greiner

Topological excitations in ultracold atomic gases (30 min) 42
Masahito Ueda

Non-Abelian Josephson effect (30 min) 43
Wu-Ming Liu

Monday 26 July, 2.30 pm-3.30 pm

Hot Topics (20 min each)

Emergence and study of quantum turbulence in a Bose condensate 44
Vanderlei Bagnato

A trapped single ion inside a Bose-Einstein condensate 45
Michael Kohl

Helium fine structure theory for the determination of alpha 46
Krzysztof Pachucki

Tuesday 27 July, 8.30 am-10.15 am

Atomic tests of fundamental physics and basic symmetries

Perspectives for precision tests with antihydrogen (45 min) 47
Michael Doser

Precision measurement of the $n=2$ triplet P states of helium and the determination of the fine-structure constant (30 min) 48
Eric Hessels

Nuclear clock and variation of fundamental constants (30 min) 49
Victor Flambaum

Tuesday 27 July, 10.45 am-12.45 am

Precision measurements, including atomic clocks, atom interferometers and fundamental constants

Space clocks and fundamental tests (30 min) 50
Christophe Salomon

Optical lattice clocks and frequency comparison (30 min) 51
Hidetoshi Katori

Single-atom optical clocks - it's about time! (30 min) 52
Jim Bergquist

Atom lasers and their prospects for application to precision inertial measurements (30 min) 53
John Close

Tuesday 27 July, 2.30 pm-3.30 pm

Hot Topics (20 min each)

Precision measurement of the gravitational redshift and other applications of atom interferometers 54
Holger Muller

The charge radius of the proton 55
Randolf Pohl

Integrated quantum photonics 56
Jeremy O'Brien

Tuesday 27 July, 8.00 pm-10.00 pm

Evening Lectures

A tribute to Vladilen Letokhov

Victor Balykin

Wave-particle duality for a single photon: quantum weirdness brought to light

Alain Aspect

Wednesday 28 July, 8.30 am-10.15 am

Ultracold Fermi gases

Strongly interacting Fermi gases: from ultracold atoms to molecules (45 min) 57

Gora Shlyapnikov

Thermodynamics of strongly correlated Fermi gases (30 min) 58

Frederic Chevy

Universal structure of a strongly interacting Fermi gas (30 min) 59

Chris Vale

Wednesday 28 July, 10.45 am-12.45 pm

Ultracold molecules

Dipolar effects in ultracold molecules (45 min) 60

Matthias Weidemüller

Ultracold polar molecules - ultracold chemistry and dipolar collisions (30 min) 61

Silke Ospelkaus

Ultracold and dense samples of ground-state molecules in lattice potentials (30 min) 62

Hanns-Christoph Nägerl

Hot topic

The Dicke quantum phase transition with a superfluid gas in an optical cavity (20 min) 63

Kristian Baumann

Thursday 29 July, 8.30 am-10.15 am

Quantum simulators with atoms and ions

Quantum magnetism with ultracold atoms (45 min) 64
Wolfgang Ketterle

Competition between pairing and ferromagnetic instabilities in the ultracold Fermi gases near Feshbach resonances (30 min) 65
Eugene Demler

Inelastic light scattering to probe strongly correlated bosons in optical lattices (30 min) 66
Chiara Fort

Thursday 29 July, 10.45 am-12.45 pm

Quantum simulations with trapped ions (30 min) 67
Christian Roos

Few-body systems

Universal four-body collisions (30 min) 68
Chris Greene

Few body physics in ultracold gases: the fascinating case of cesium (30 min) 69
Francesca Ferlaino

Bose-Bose mixtures in confined dimensions (30 min) 70
Francesco Minardi

Thursday 29 July, 2.30 pm-3.30 pm

Ultrafast phenomena and free electron lasers

Timing-critical studies of atomic and molecular dynamics at the XUX FEL "FLASH" (30 min) 71
Markus Drescher

Attosecond imaging of molecular electronic wave-packets (30 min) 72
Richard Taieb

Friday 30 July, 8.30 am-10.15 am

Quantum information with atoms and ions

Quantum information and quantum metrology with trapped ions
(45 min) 73

Dave Wineland

Coherently walking, rocking and blinding single neutral atoms (30min) 74

Artur Widera

Quantum memory and sensing with entangled room temperature
atoms (30 min) 75

Eugene Polzik

Friday 30 July, 10.45 am-12.45 pm

Quantum optics and cavity QED with atoms

Title to be announced (45 min) 76

Roy Glauber

Quantum optics with cold quantum gases (45 min) 77

Helmut Ritsch

Optical detection of a single atom without spontaneous emission
(30 min) 78

Jakob Reichel

Friday 30 July, 2.10 pm-4.00 pm

Hot topic

Nonlinear optics with single atoms in optical cavities (20 min) 79
Karim Murr

Hybrid and optomechanical systems

Cavity QED with superconducting circuits: Measuring microwave photon correlations (30 min) 80
Andreas Wallraff

Quantum optomechanics in the strong coupling regime (30 min) 81
Markus Aspelmeyer

From cavity electromechanics to cavity optomechanics (30 min) 82
Cindy Regal

Friday 30 July, 4.30 pm-5.50 pm

Hot topics (20 min each)

Superfluidity in polariton ensembles 83
Elisabeth Giacobino

Thermalization of a two-dimensional photonic gas in a 'white wall' photon box 84
Martin Weitz

Demonstration of a CNOT gate and deterministic entanglement of two neutral atoms using Rydberg blockade 85
Mark Saffman

Quantum information processing with neutral atoms using Rydberg blockade 86
Philippe Grangier

Poster Session I: Monday, July 26, 4.00 pm-6.00 pm

	Atom interferometry	
Mo1	Measuring the Acceleration of Free Fall with an Atom Chip BEC Interferometer	88
Mo2	Microwave near-fields on an atom chip: Characterization and use for state-dependent manipulation of ultracold atoms	89
Mo3	Robust Rotational Schrödinger Cats and Heisenberg-Limited Interferometry with Strongly Correlated Ultracold Atoms	90
Mo4	Gravimetry with Bose-Einstein Condensates	91
Mo5	Rephasing the nonlinear dynamics of a two-component Bose-Einstein condensate	92
Mo6	Loading an Inductively Coupled Magnetic Ring Trap	93
Mo7	Progress on Cold Atom Interferometry Gravimeter	94
	Atomic and Ionic Structure	
Mo8	Electromagnetically induced transparency in an erbium-doped crystal	95
	Atomic clocks	
Mo9	Thermal-noise-limited millimeter-size MgF ₂ WGM resonator for laser frequency stabilization	96
Mo10	Laser cooling of atoms in an integrating sphere and its application on cold atom clock	97
Mo11	Al ⁺ Optical Clocks	98
Mo12	Entangling the lattice clock: Towards Heisenberg-limited timekeeping	99
Mo13	Giant coherence times in a trapped atomic gas	100
Mo14	Towards a lattice based neutral magnesium optical frequency standard	101
Mo15	Frequency measurement of the $4s^2S_{1/2}$ - $3d^2D_{5/2}$ transition of a single laser-cooled $^{40}\text{Ca}^+$ ion	102
Mo16	Decoherence and Collisional Frequency Shifts	103
Mo17	Reducing the Uncertainty due to Doppler Shifts to Improve the Accuracy of Cesium Clocks	104

Mo18	Development of a strontium optical lattice clock at NPL	105
	Atomic Interactions and Collisions	
Mo19	Electron impact excitation of Si ions (XII-XIV)	106
Mo20	Electron impact excitation of C V	107
Mo21	s-wave scattering by an absorbing nanowire	108
Mo22	Series of doubly-excited states $^1S^e$ and $^3S^e$ of Be^{2+} below the $N=2$ threshold of Be^{3+}	109
Mo23	Strong-force effects in cold antiproton-atom collisions	110
Mo24	Properties of decaying Feshbach resonances	111
Mo25	High probability single atom occupancy in a microscopic dipole trap	112
	Atoms in External Fields	
Mo26	Stabilization of Helium in Intense Laser Fields	113
Mo27	Anharmonicity-driven dynamics of a cold atom cloud in a combined trap	114
Mo28	Composite pulses for three-state quantum systems	115
Mo29	Spin Nutation Induced by Atomic Motion in a Magnetic Lattice	116
Mo30	Non-dispersive matter wave packets in driven systems	117
	Bose gases	
Mo31	Localised matter wave excitations in an optical lattice	118
Mo32	^{85}Rb Bose-Einstein condensates with tunable interactions	119
Mo33	Finite temperature theory for novel cold gas systems	120
Mo34	Dynamic Effects of a Feshbach Resonance on Bragg Scattering from a BEC	121
Mo35	Crossover from hydrodynamic to Josephson oscillations in a double well BEC	122
Mo36	The Effects of Disorder on a Quasi-2D System of Ultra-Cold Atoms	123
Mo37	Particle Velocimetry of Bose-Einstein Condensates for Studies of Quantum Turbulence	124
Mo38	Finite temperature theory for the dipolar Bose gas	125
Mo39	Relative number squeezing in four wave mixing of matter waves	126
Mo40	Observation of vortex dipoles in an oblate Bose-Einstein	127

	condensate	
Mo41	Vortex Lattices in Anisotropic Traps	128
Mo42	Ion-induced Density Bubble in a Strongly Correlated One-dimensional Quantum Gas	129
Mo43	Controlled Vortex Formation in an All-Optical Bose-Einstein Condensate	130
Mo44	Matter wave amplification in a spatially modulated Bose gas released from an optical lattice	131
Mo45	Atom Laser Locking, FourWave Mixing and Single Mode Guiding with Metastable Helium Atoms	132
Mo46	Theory of Two-Component BEC Interferometry	133
Mo47	Soliton creation during a Bose-Einstein condensation	134
Mo48	Proposal to realise a Kibble-Zurek mechanism in a spin-1/2 Bose-Einstein condensate	135
Mo49	Generating Entangled Atom Lasers	136
Mo50	Superfluid Critical Velocity in Trapped Bose-Einstein Condensates	137
Mo51	Midlands Ultracold Atom Research Centre at Nottingham, UK	138
Mo52	Formation Dynamics of Non-Equilibrium Bose-Einstein Condensates	139
Mo53	Formation of skyrmion lattice in a rapidly-quenched and fast-rotating ferromagnetic spinor Bose-Einstein condensate	140
Cold molecules and dipolar gases		
Mo54	Coherent transfer of ultracold photoassociated molecules into the rovibrational ground state	141
Mo55	Dipolar relaxation of a chromium Bose-Einstein condensate in optical lattices	142
Mo56	Dipolar effects on the excitation spectrum of a chromium Bose-Einstein condensate	143
Mo57	Solids, Supersolids, and Pairing with Cold Polar Molecules	144
Mo58	Wigner Crystallization of Rotating Dipolar Fermions in the Fractional Quantum Hall Regime	145

Mo59	Exact multichannel calculations of 2s2p bound levels in bosonic and fermionic ultracold helium dimers	146
Mo60	Equilibrium Properties of Trapped Dipolar Gases at Finite Temperatures	147
Mo61	Formation and collisional dynamics of ultracold Rb ₂ in the ground X ¹ Σ _g ⁺ state in an optical dipole trap	148
	Cooling and Trapping	
Mo62	Classical Theory of Mirror-Mediated Cooling	149
Mo63	Quantum State Preparation using Adiabatic Techniques	150
Mo64	Magneto-optical trapping of ⁴¹ K and ultracold collisions with ⁸⁵ Rb	151
Mo65	Microscopic Atom Trap Arrays	152
Mo66	Ultra Cold source temperature measurement with a time-dependent electric field	153
Mo67	Vortex Based Superconducting Atom Chip	154
Mo68	Source Temperature Measurements of an Ultracold Electron Source	155
Mo69	Mirror-mediated cooling of atoms, molecules and particles	156
Mo70	Manipulation of small atom clouds in a microscopic dipole trap	157
Mo71	Photoionization Cross-Section Measurements in a Rubidium Magneto-Optical Trap	158
Mo72	Single Permanent Magnetic Microtraps for Direct Forced Evaporative Cooling	159
	Fermi gases	
Mo73	Quantum dynamics of the dissociation of a condensate of dimers into fermionic atoms	160
Mo74	S-wave interactions in a quantum-degenerate two-species Fermi-Fermi mixture	161
Mo75	Description of collective modes in ultracold Fermi systems : dynamical approach and higher order in moment method	162
Mo76	The Pseudogap and Universal Relations in the BCS-BEC Crossover	163
Mo77	Confinement induced resonance in a quasi-2D Fermi gas	164

Mo78	First Principle Many-Body Theory for Strongly Interacting Ultracold Fermi Atoms	165
Mo79	Strong Coupling Effect on Normal State of Fermi gas with a p-wave interaction	166
Few body systems		
Mo80	Ultracold Bose-Fermi mixture in a triple-well ring	167
Mo81	Quantization function for attractive potential tails	168
Mo82	Study of Efimov physics in two different spin states of the same atomic system	169
Mo83	RF-Spectroscopy of Efimov Trimers	170
Hybrid and optomechanical systems; mesoscopic quantum systems		
Mo84	Backaction of ultracold atoms on a mechanical oscillator	171
Mo85	Slowing and stopping light using an optomechanical crystal array	172
Mo86	Entangling bright polaritons in a nano-mechanical cavity	173
Mo87	Cold atoms near superconductors	174
Mo88	Ultracold Quantum Gases near Carbon Nanotubes	175
Intense Fields and Ultrafast Phenomena		
Mo89	Extreme Ultraviolet Frequency Comb via Intracavity High Harmonic Generation	176
Mo90	Phase-Matched High Harmonic Generation for Study of Rotational Coherent Molecular Dynamics	177
Mo91	Amplification of XUV radiation in a dual-gas high-harmonic generation system	178
Optical lattices		
Mo92	Feshbach Resonance in Optical Lattices and the Quantum Ising Model	179
Mo93	Investigating dressed matter waves in periodic potentials	180
Mo94	Many-body state preparation and heating of cold atoms in optical lattices	181
Mo95	Extracting quantum critical properties of Superfluid-Mott insulator transition of bosonic atoms in a realistic (finite temperature and finite trapping potential) experiment	182

Mo96	Probing quantum gases in optical lattices by momentum-resolved Bragg spectroscopy	183
Mo97	Equilibration and Thermometry of Optical Lattice Antiferromagnets	184
Mo98	A real-time controllable Brownian Motor realized with cold atoms in optical lattices	185
Mo99	Gutzwiller Analysis on Bose-Fermi Mixtures of Ytterbium isotopes in an Optical Lattice	186
Mo100	Mechanical properties of propagation invariant beams and their effect in cold atoms	187
Mo101	Tunneling effect observed in the resonance fluorescence spectrum of a single atom in a Lamb-Dicke regime	188
	Other	
Mo102	Semi-symmetric molecules and their symmetry operations with Clifford algebra	189
Mo103	Position of Muonic Molecular Resonances in Hydrogen Multilayer	190
	Precision measurements and fundamental constants	
Mo104	Dynamical transport control of matter waves in two-dimensional optical lattices	191
Mo105	Ab initio study of ground and low-lying excited states of CaH^+ molecule	192
Mo106	A pT-scale magnetic micro-gradiometer based on absorption detection of diamond NV centers	193
Mo107	Bose-Einstein Condensation in Microgravity	194
Mo108	Possible Enhanced Sensitivity to the Time Variation of Fundamental Constants in SiBr	195
Mo109	A multiplexed optical link for ultra-stable frequency dissemination	196
Mo110	Measurement of the Boltzmann constant by the Doppler Broadening Technique at the 10^{-5} accuracy level	197
Mo111	Quantum Enhanced Metrology: Optimal Phase Estimation in Optical and Atomic Interferometry	198
Mo112	Antihydrogen Clock	199

Mo113	Quantum non-demolition measurement and preparation of non-classical states of the light	200
Mo114	Direct spectroscopy of the 1557 nm 2^3S-2^1S transition in metastable helium	201
Quantum information		
Mo115	Process tomography of dynamical decoupling in a dense optically trapped atomic ensemble	202
Mo116	Experimental multiparticle entanglement dynamics induced by decoherence	203
Mo117	Multiqubit symmetric states with high geometric entanglement	204
Mo118	Continuous Variable Entanglement in Two Ultracold Atoms	205
Mo119	Coherent control of entanglement with atomic ensembles	206
Mo120	Quantum Entanglement Between Optical Photon and Solid-state Spin Qubit	207
Mo121	Nonlinear Faraday Rotation in Cold Atoms for Quantum Information and Magnetometry	208
Mo122	Quantum Sampling Using Schrödinger's Equation	209
Mo123	Criteria for spin EPR entanglement and Bell nonlocality	210
Mo124	EPR entanglement in a four-mode BEC	211
Mo125	Entanglement of Two Individual ^{87}Rb Atoms Using the Rydberg Blockade	212
Quantum optics & cavity QED		
Mo126	Interacting cavities: Single photon opto-mechanics and a set of two coupled opto-mechanical systems	213
Mo127	Coherent Blue Light Generation in Rb Vapour	214
Mo128	Four-wave mixing as a sub-kHz probe for ground-state atomic coherence	215
Mo129	Propagation of pulsed thermal light in Rb atomic vapor	216
Mo130	Cold atoms and QND measurements in an optical cavity	217
Mo131	Polaritons and Pairing Phenomena in Bose–Hubbard Mixtures	218
Mo132	Collective Dynamics of Bose–Einstein Condensates in Optical Cavities	219

Mo133	Photonic Bus for Trapped Ions	220
Mo134	Electromagnetically Induced Transparency Based Cross-Phase Modulation at Atto-Joule Levels	221
Mo135	Near field effects in superconducting atom chips	222
Mo136	Electromagnetically induced transparency with single atoms in a cavity	223
Mo137	Spinor slow-light polaritons and random-mass Dirac model	224
	Quantum simulators with atoms and ions	
Mo138	Photonic quantum simulators	225
Mo139	Anderson localization with ultracold atoms: from the 1D direct observation to the quantum simulation of the 3D transition	226
Mo140	Predicted mobility edges in one-dimensional incommensurate optical lattices	227
Mo141	Ion Trapping of the Third Kind	228
	Spectroscopy	
Mo142	DROM-spectroscopy in pure paraffin wall-coated cell	229
Mo143	High Power Narrow Linewidth Fiber Amplifiers for Atomic Physics	230
Mo144	Precision frequency measurement of $2^2S_{1/2} \rightarrow 3^2S_{1/2}$ transition of atomic lithium	231
Mo145	Nonlinear spectroscopy of Tl $6P_{1/2}$ - $7S_{1/2}$ transition	232
Mo146	Towards a chip-scale laser lock for space-borne applications	233
Mo147	A multi-functional platform to investigate nonlinear effects in vapor cells with application to magnetometry and clocks	234
Mo148	Cavity-Enhanced Direct Frequency Comb Velocity Modulation Spectroscopy	235
Mo149	Periodically locked continuous-wave cavity ringdown spectroscopy	236
Mo150	Collisions between cold metastable neon atoms in the presence of a resonant light field	237
Mo151	Hyperfine structure of low-lying states of $^{14,15}\text{N}$	238
	Tests of fundamental physics and basic symmetries	

Mo152	Enhanced laboratory sensitivity to variation of the fine-structure constant using highly-charged ions	239
Mo153	Interpreting laboratory and observational limits on variation of fundamental constants in terms of possible spatial variation	240
Mo154	A New Limit on CPT and Lorentz Violation Using a Rotating K- ³ He Co-magnetometer	241
Mo155	Improved test of the standard model of elementary particles with atomic parity violation	242
Mo156	Atomic Ionization by keV-scale Pseudoscalar Dark Matter Particles	243
Trapped ions		
Mo157	Trapping of Yb ions in a wide optical access trap: Towards optimum free-space photon-atom coupling	244
Mo158	A micro-fabricated surface electrode ion trap with integrated optical resonator	245
Mo159	Trapped ytterbium ions for scalable quantum technology	246
Mo160	Sympathetic crystallization of CaH ⁺ produced by laser-induced chemical reaction	247
Mo161	State-independent experimental test of quantum contextuality with trapped ions	248

Poster Session II: Tuesday, July 27, 4.00 pm-6.00 pm

	Atom interferometry	
Tu1	Two-Dimensional Localization of a Four-level Tripod-Type System in Laser Fields	250
Tu2	Numerical Simulations on the Interferometry of Bose-Einstein Condensates in a Circular Waveguide	251
Tu3	Double-Well Interferometry on an Atomchip	252
Tu4	Many-body quantum phenomena in atomic Bose-Josephson junctions	253
Tu5	Large Area Cold Atom Gyroscope	254

Tu6	Advanced laser systems for coherent manipulation of matter waves in microgravity	255
	Atomic and Ionic Structure	
Tu7	Variational Pair-Correlation Functions for Atomic Properties	256
Tu8	Fine-structure energy levels and lifetimes in Cr XII	257
	Atomic clocks	
Tu9	Dick effect and long term stability evaluation of HORACE compact cold atom clock	258
Tu10	AC Zeeman shifts in a trapped atom clock	259
Tu11	Optoelectronic oscillator with an intra-loop Fabry-Perot cavity	260
Tu12	Towards an indium ion optical clock	261
Tu13	A dipole lattice trap for mercury: pathway to a new optical clock.	262
Tu14	Using ($\Delta F = 1; \Delta m = \pm 1$) transitions as a diagnostic tool for atomic fountain clocks	263
Tu15	New Prospects for Optical Lattice Clocks Based on Ultracold Alkaline-Earth-Like atoms	264
Tu16	Research on optical clock with ytterbium atoms trapped in optical lattice	265
Tu17	Laser spectroscopy of forbidden transitions in trapped ions: from electronic to nuclear	266
Tu18	Non-Linear Spectroscopy of Rubidium in Hollow Core Fibres For Compact Clocks and Quantum Optics	267
	Atomic Interactions and Collisions	
Tu19	Radiofrequency dressing of multiple Feshbach resonances	268
Tu20	Resonant scattering effect in spectroscopies of interacting atomic gases	269
Tu21	Polarized alkali vapor with minute-long transverse spin-relaxation time	270
Tu22	Long-range interactions of atomic systems	271
Tu23	Microwave-Induced Feshbach Resonances	272
Tu24	Dipole blockade and counting statistics in ultra-cold and Bose condensed Rydberg samples	273

Tu25	Progress towards using partial wave scattering for analysing Feshbach resonances	274
	Atoms in External Fields	
Tu26	Heading Error of an Alignment-Based Atomic Magnetometer Operating in Earth's Field	275
Tu27	Magnetometry in the Mesospheric Sodium Layer	276
Tu28	Interference in intrashell crossings caused by two hidden crossings	277
Tu29	Broadband adiabatic conversion of light polarization	278
Tu30	Autler-Townes doublet and electromagnetically-induced transparency resonance probed by an ultrashort pulse train	279
	Bose gases	
Tu31	The equilibrium state of a trapped two-dimensional Bose gas	280
Tu32	Number Phase Wigner Representation for Efficient Stochastic Simulation	281
Tu33	Geometric operations of a Sodium Bose-Einstein condensate in an optical lattice	282
Tu34	The fountain effect in a Bose-Einstein condensate	283
Tu35	On the momentum distribution of a harmonically trapped 1D Bose gas	284
Tu36	A parametric amplifier of matter waves	285
Tu37	Classification of topological excitations with influence of vortices	286
Tu38	A Bose-Einstein Condensate of Calcium	287
Tu39	Landau-level Mixing Effect on Rotating Bose-Einstein Condensate with Attractive Interaction in Anharmonic Trapping Potential	288
Tu40	Splitting dynamics of giant vortices in dilute Bose-Einstein condensates	289
Tu41	Temporal coherence of a Raman-outcoupled continuously pumped atom laser	290
Tu42	Excitation Frequencies and Static Solutions of Trapped Dipolar BECs in the Thomas Fermi Regime	291
Tu43	Spatial Coherent Transport of Interacting Dilute Bose Gases	292

Tu44	Phase fluctuations in anisotropic Bose condensates: from cigars to rings	293
Tu45	Dynamics of repulsively and attractively interacting bosons in 1D after an interaction quench	294
Tu46	Dynamical and Landau instabilities of condensed cold atom system in nonequilibrium Thermo Field Dynamics	295
Tu47	Measuring entanglement in twin well condensates	296
Tu48	One-dimensional Bose gases in and out of equilibrium	297
Tu49	Comparison of Finite Temperature Bose Gas Theories	298
Tu50	Shot-to-Shot Variations in Dark Soliton Trajectories	299
Tu51	How do Gaussian Anharmonicities Affect Soliton Dynamics?: The role of soliton-sound interactions	300
Tu52	Enhanced and reduced atom number fluctuations in a BEC splitter	301
Tu53	Scattering effects in the dynamics of a cold Bose gas	302
Cold molecules and dipolar gases		
Tu54	Using cold molecules to detect molecular parity violation	303
Tu55	Dynamics of ultracold polar molecules in a microwave field	304
Tu56	RF-association spectroscopy of $^{41}\text{K}^{87}\text{Rb}$ Feshbach molecules : toward the production of ultracold bosonic polar molecules	305
Tu57	Relativistic calculations of ground and excited states of LiYb molecule for ultracold photo association spectroscopy studies	306
Tu58	Ultracold gas of ground-state polar KRb molecules in 2D	307
Tu59	Laser Cooling of Molecules by Zero Velocity Selection and Single Spontaneous Emission	308
Tu60	Low-Energy Collisions of Ammonia and Rubidium	309
Tu61	Vibrational quantum defect to analyse weakly-bound molecules. Application to Cs_2 to detect coupled states	310
Cooling and Trapping		
Tu62	Sub-Doppler Laser Cooling in Planar Geometries with a Single Laser Beam	311
Tu63	Laser cooling of Sr atoms on the $^3\text{P}_2 - ^3\text{D}_3$ transition at 2.9 mm	312

Tu64	Dynamic Versatility of Hollow Optical Tunnels	313
Tu65	Free Space Atom Chips	314
Tu66	A Miniaturized Planar Microwave Guide for Electrons	315
Tu67	Efficient Two-dimensional Subrecoil Raman Cooling of Atoms in a Tripod Configuration	316
Tu68	A 10 μm -period magnetic lattice: optically resolved trapping of ultracold ^{87}Rb atoms in the $F=1$ state	317
Tu69	Towards Raman cooling of a single atom in a tightly focused optical tweezer	318
Tu70	Electron bunch shaping with an ultracold plasma	319
Tu71	Loss Mechanism of Superconducting Atom Chips	320
Tu72	Programmable trap geometries with superconducting atom chips	321
Fermi gases		
Tu73	Superfluid/ferromagnet/superfluid-junction and π -phase in a spin-polarized Fermi gas	322
Tu74	Structure factor of a strongly interacting Fermi gas	323
Tu75	Universal thermodynamics and critical behaviour in one-dimensional strongly interacting fermions	324
Tu76	Three repulsively interacting fermions in harmonic traps: Exact solution, ferromagnetism, and high-temperature thermodynamics	325
Tu77	Collective Oscillations in Bose-Fermi Mixtures at Finite Temperature in Time-Dependent Approach	326
Tu78	BCS-BEC Evolution and Majorana Zero Modes in p-wave Resonant Fermi Gases	327
Tu79	Physics of $\text{SU}(3)$ cold atom gases: crystallization and color-charge separation	328
Few body systems		
Tu80	Confining potential approaches to low energy scattering	329
Tu81	Efimov physics in 3-component lithium 6	330
Tu82	Non-universal Efimov Atom-Dimer Resonances in a Three-Component Mixture of ^6Li	331

Poster Session III: Thursday, July 29, 4.00 pm-6.00 pm

Atom interferometry		
Th1	Fidelity of near resonant states in the kicked rotor	410
Th2	Nondispersivity of the scalar Aharonov-Bohm phase observed in the Ramsey atom interferometry with a cold atomic ensemble	411
Th3	An atom interferometer on a chip	412
Th4	Atom chip based generation of entanglement for quantum metrology	413
Th5	The Atomic Coherence Population Control Using Stimulated Raman Transitions	414
Th6	Measurement of local gravity via a cold atom interferometer	415
Atomic and Ionic Structure		
Th7	Fine-structure energy levels, oscillator strengths and lifetimes in Si-like Copper	416
Th8	Measuring the Nuclear Magnetic Octupole Moment of Barium-137	417
Atomic clocks		
Th9	Stark shift of the Cs clock transition frequency: A CPT-pump-probe approach	418

Th10	Blackbody Radiation Shifts and Magic Wavelengths for Atomic Clock Research	419
Th11	Measurements in an optical lattice clock	420
Th12	Short-term stability improvements of an optical frequency standard based on free Ca atoms	421
Th13	Interaction-induced suppression of collisional shifts in a Sr-87 optical lattice clock	422
Th14	Frequency comparison between two optical lattice clocks towards 10^{-16} uncertainty	423
Th15	High harmonic generation toward direct excitation of atomic transitions in VUV	424
Th16	Laser Cooling and Trapping in Ytterbium Optical Clocks	425
Th17	Spectroscopy of the ^{87}Sr Clock Transition toward an Optical Lattice Clock	426
Th18	New approaches to an atomic clock based on coherent population trapping	427
Atomic Interactions and Collisions		
Th19	Measurement of Charge Exchange Cross Sections for the He^- Production in Li	428
Th20	Feshbach resonances of trapped ultracold atoms	429
Th21	Enhancement of Rb fine-structure transfer in inert buffer gases due to three-body collisions	430
Th22	Laboratory Astrophysics - Cascade vs. Direct Contributions to the O^{6+} on CO Charge-Exchange XUV Emission at Solar Wind Velocities	431
Th23	Collisional properties of metastable ytterbium atoms	432
Th24	First measurement of the Lee-Huang-Yang correction for atomic bosons	433
Th25	Nanometer-scale spatial modulation of an inter-atomic interaction in a Bose-Einstein condensate	434
Atoms in External Fields		
Th26	Nonsequential Two-Photon Double Ionization of Atoms: Identifying the Mechanism	435
Th27	Observation of delayed four- and six-wave mixing in a coherently prepared atomic ensemble	436

Th28	Direct simulation of non-adiabatic spin flips and evaporation in a magnetic trap	437
Th29	Spatially Resolved Excitation of Rydberg Atoms on an Atom Chip	438
Bose gases		
Th30	On the order of BEC transition in weakly interacting gases as predicted by mean-field theory	439
Th31	Vortex dynamics in a warm Bose-Einstein condensate	440
Th32	Wavepacket engineering of textures in pseudospin BECs	441
Th33	Bose statistics and classical fields	442
Th34	Time averaged optical traps for the investigation of superfluidity in BEC	443
Th35	Rotating Bose-Einstein Condensates in Time-Averaged Adiabatic Potentials	444
Th36	All-Optical Rb BEC	445
Th37	Josephson oscillations of heat - collective excitations of few-mode Bose-Hubbard systems	446
Th38	Formation of vortex superlattice and Bloch domains in a rapidly-quenched and fast-rotating antiferromagnetic spinor Bose-Einstein condensate	447
Th39	Quantum control of an interacting Bose-Einstein condensate	448
Th40	Kelvin-Roton Instabilities of Vortex States in BEC with Finite-Range Interactions	449
Th41	Determination of Scattering Length Using Phase Separation Dynamics near Feshbach Resonance	450
Th42	Direct Measurement of the Third Order Correlation Function of a Bose-Einstein Condensate	451
Th43	Time-resolved density correlations as probe of squeezing in toroidal Bose-Einstein condensates	452
Th44	Thermodynamics of quasi-2D boson gases and a BCS-BEC model of high- T_c superconductivity in layered cuprates	453
Th45	Modeling the collision of two ultra-cold clouds of bosons	454

Th46	Anomalous Tunneling of Spin Wave Excitations in a Spin-1 Spinor Bose-Einstein Condensate	455
Th47	The small-scale behavior of turbulent atomic Bose-Einstein Condensates	456
Th48	Controlling one-dimensional spin dynamics with state-dependent potentials	457
Th49	Phases of vortex matter in rotating Bose-Einstein condensates	458
Th50	Towards a Dual-species BEC of Noble and Alkali Gases on an Atom Chip	459
Th51	Large Production of Bose-Einstein Condensate in a Tilted Dipole Trap	460
Th52	Manipulation of the quantum state of a Bose-Einstein Condensate using superradiance	461
Cold molecules and dipolar gases		
Th53	Rydberg's cat: creating giant polyatomic molecules	462
Th54	Vortex Lattices in Dipolar Spin-1 Bose-Einstein Condensates	463
Th55	A slow and cold beam of YbF molecules	464
Th56	Sympathetic cooling of trapped polar molecules with ultracold atoms: results of trajectory simulations	465
Th57	Supersolid Phase of Polar Molecules in a Continuous Space	466
Th58	Interaction-induced ferroelectricity in the rotational states of polar molecules	467
Th59	Stability of Superflow in Supersolid Phases of Dipolar Bose Gases in Moving Optical Lattices	468
Th60	Realizing Dipolar Chain Liquid of Polar Molecules in 3D Optical Lattices	469
Th61	Off-axis Vortex in a Rotating Dipolar Bose-Einstein Condensation	470
Cooling and Trapping		
Th62	Cold Atom Temperature Measurements using an Optical Nanofibre	471
Th63	RF evaporative cooling in a resonant RF-dressed trap	472
Th64	A New Method for Producing Ultracold Molecular Ions	473

Th65	Cross Phase Modulation with Group-Velocity-Matched Double Slow Light Pulses	474
Th66	Laser cooling of atoms by collisional redistribution of fluorescence	475
Th67	Magneto-Optical Trapping of Neutral Mercury	476
Th68	Laser System for Laser Cooling Relativistic Ion Beams and Dipole Traps	477
Th69	The external chip economically manufactured : Toward the condensation	478
Th70	Trapping a single neutral atom in a blue detuned optical bottle beam trap	479
Th71	Magnetic traps designed with type-II superconducting strips in the remanent state	480
Th72	Optical Double-well Array Based on Binary Optics Method	481
Fermi gases		
Th73	Thermodynamics of ultracold Fermi gases	482
Th74	Topological quantum phase transitions of attractive spinless fermions in a honeycomb lattice	483
Th75	Virial relations for ultracold trapped Fermi gases with finite range interactions through the BCS-BEC crossover	484
Th76	Towards Single-Site Imaging of Degenerate Fermi Gas in an Optical Lattice	485
Th77	Degenerate quantum gases of strontium	486
Th78	Ordered States and Mott Transition States of Three-Component Repulsive Fermionic Atoms in Optical Lattices	487
Th79	Strong Coupling Effects on the single-particle properties in the BCS-BEC Crossover Regime of Superfluid Fermi Gases	488
Few body systems		
Th80	Benchmark Calculations of Polarizabilities and Long-Range Dispersion Coefficients for Atoms and Ions	489
Th81	Calculations of Polarizabilities and Hyperpolarizabilities for H_2^+ , HD^+ , and D_2^+ ions	490

Th82	Variational Calculations for Low-Lying States of Li and Be ⁺ Using Hylleraas Bases	491
Th83	Coherent correlation in bound 2-fermion interaction: a model for the Higgs boson?	492
Hybrid and optomechanical systems; mesoscopic quantum systems		
Th84	An integrated, multi-channel, atom-light interface	493
Th85	A Nanoscale Quantum Interface for Single Atoms	494
Th86	Quantum signatures of the dynamics of a vibrational mode of a SiN membrane within an optical cavity	495
Th87	Cooling atoms, particles and polarisable objects using dissipative dipole forces	496
Th88	A trapped single ion inside a Bose-Einstein condensate	497
Intense Fields and Ultrafast Phenomena		
Th89	Strong-Field Ionization of Laser-Irradiated Diatomics: The Signatures of Orientation and Inner Shell Effects	498
Th90	Oral applications of scanned ultra-short laser pulses	499
Optical lattices		
Th91	Experiments with Two-component Bosons in State-Dependent Optical Lattices	500
Th92	Ultracold fermions in optical lattices: Simulating condensed matter systems and beyond	501
Th93	Variational study on Mott transition in the S=1 two-dimensional Bose-Hubbard model	502
Th94	Towards Ultracold Atoms in Exotic Optical Traps	503
Th95	Diatomic Molecules in Optical Dipole Traps	504
Th96	New quantum phases in triangular and hexagonal optical lattices	505
Th97	Forming Bose-Einstein gap solitons on the background	506
Th98	One Dimensional controllable optical lattice with intracavity EO crystal tuned ECDL	507
Th99	Number Squeezing and Spectroscopic Line Shape of an Array of Ytterbium Condensates in a 1D optical lattice	508
Other		

Th100	Partially coherent electron diffraction of biomolecules using an ultracold plasma electron source	509
Th101	Beam diagnostics for Helium beam microscopy	510
Th102	Electron Evaporation from an Ultracold Plasma	511
Precision measurements and fundamental constants		
Th103	Single Ion Imaging with a Microfabricated Optic	512
Th104	Ultra-Sensitive Magnetometry using Atoms in Fibres	513
Th105	Precision measurements of the Casimir force between metallic and semiconducting plates	514
Th106	Techniques to reduce the acceleration sensitivity of cavity stabilized lasers	515
Th107	Ultrahigh-fidelity quantum gates using smooth composite pulses	516
Th108	High Accuracy Spectroscopy of Alkali Metals for the Determination of the Boltzmann Constant	517
Th109	Precision Measurement of the Decay Rates to the Ground State for the Helium $n=2$ Triplet Manifold	518
Th110	Investigation of Highly Sensitive Atomic Magnetometer	519
Th111	Cold atom gravimeter for onboard applications	520
Th112	A Quantum Degenerate Source for Atom Interferometry	521
Th113	Demonstration of Rydberg blockade between atoms in an optical lattice	522
Quantum information		
Th114	Extending Coherence of Nitrogen-Vacancy in Diamond	523
Th115	Quantum interference of photons emitted by two remotely trapped atoms	524
Th116	EIT in warm atomic vapors: beyond the Λ scheme approximation	525
Th117	Deterministic resolution single ion source	526
Th118	Entanglement detection from interference fringes in atom-photon systems	527
Th119	Dark Resonances and All Optical Spin Manipulation of an NV Center in Diamond	528
Th120	Design of quantum Fourier transforms and quantum algorithms by using circulant Hamiltonians	529

Th121	A quantum Turing machine	530
Th122	Remote Spin Coupling and Room Temperature Quantum Computation in NV Diamond Centers	531
Th123	High efficient loading of two atoms into a microscopic optical trap by using a spatial light modulator	532
Quantum optics & cavity QED		
Th124	Substantial interaction between a single atom and a focused light beam	533
Th125	Quadripartite continuous-variable entanglement via quadruply concurrent downconversion	534
Th126	Novel Control of Atom-Atom Interactions in a Two-Way Cascaded Cavity QED System	535
Th127	Ground-state Quantum Beats in Cavity QED	536
Th128	Quantum phase transition of nonlinear light in the finite size Dicke Hamiltonian	537
Th129	Entanglement between internal and external degrees of freedom of a driven trapped atom	538
Th130	Using noise to improve atom-cavity coupling	539
Th131	Multi-Photon Blockade in Cavity QED	540
Th132	Strong Interactions of Single Atoms and Photons near a Dielectric Boundary	541
Th133	Multipartite entanglement production using feedback	542
Th134	Cavity QED with single defects in diamond: strong coupling using superconducting resonators	543
Th135	Quantum Non-Demolition Measurement in a Radio-Frequency High Density Atomic Magnetometer	544
Th136	Cavity-Assisted Nondestructive Measurement of Rabi-Oscillations	545
Quantum simulators with atoms and ions		
Th137	Itinerant Ferromagnetism in Cold Fermionic Atoms Loaded on a Two-leg Optical Ladder	546
Th138	Simulation of quantum noise in BEC	547
Th139	Single-Site Probing of the Superfluid-Mott Insulator Transition with a Quantum Gas Microscope	548

Th140	Versatile Optical Lattices to Control Rydberg Atom Interactions for Uses in Quantum Computing	549
	Spectroscopy	
Th141	Search for biomagnetism with a sensitive atomic magnetometer	550
Th142	Transformation from EIA into EIT by incoherent pumping in ^{85}Rb D1 line	551
Th143	Isotope shifts and hyperfine structure of the Fe I 373.7 nm resonance line	552
Th144	Zero-field nuclear magnetic resonance with parahydrogen induced polarization	553
Th145	Precision spectroscopy of atomic helium $2^1\text{S}_0 - 2^1\text{P}_1$ transition	554
Th146	Observation of a Frequency-Shift in a Rb Absorption Spectrum using an Optical Nanofibre in a Vapour Cell	555
Th147	Separating krypton tracers from air samples for ultra sensitive collinear fast beam laser spectroscopy	556
Th148	High selectivity and sensitivity time of flight mass spectroscopy of Xenon tracers	557
Th149	Modulation transfer spectroscopy for accurate and wideband laser locking	558
Th150	Analysis of keV x-ray spectrum in laser-produced Samarium plasmas	559
	Tests of fundamental physics and basic symmetries	
Th151	A femtosecond frequency comb for application in a dual species atom interferometer to test the Universality of Free Fall	560
Th152	Production of Ba meta-stable states via super-radiance	561
Th153	Towards a Quantum Test of the Equivalence Principle Using Atom Interferometry	562
Th154	Progress on the measurement of the francium anapole moment	563
Th155	Symmetry Consequences of Special Relativity in an Expanding Hyperbolic Cosmology	564
	Trapped ions	

Th156	High-power picosecond laser source with 300 MHz repetition rate for trapped-ion quantum logic	565
Th157	Spin Dependent Forces on Trapped Ions: Entangled MatterWave Dynamics and Decoherence	566
Th158	Generation of entangled states of two ions using adiabatic passage	567
Th159	Superconducting microfabricated ion traps for studies of anomalous heating in trapped ions	568
